

## **TechApps for Texas Introduction**

In this video you'll learn what TechApps for Texas is and how it can help you provide technology skills instruction to your students. The TechApps for Texas curriculum includes a variety of learning experiences for students to gain knowledge and skills and apply what they are learning. There are both teacher graded and auto-scored items. As part of the teaching materials you will find teacher-led discussions and built in formative assessment opportunities along with the support materials teachers need to help guide the student learning experience. The interactive learning items provide students with a variety of experiences to keep them engaged and on target for learning the expected knowledge and skills for the TA-TEKS. Plus, much of our content can be used asynchronously, so it can be integrated seamlessly into classrooms.

Our curriculum maps provided can be easily downloaded and customized to develop the program that best meets the needs of their students. Our goal is to equip educators with the tools to provide all students the opportunity to learn, practice, and apply critical technology skills in a meaningful way. With TechApps for Texas, you can feel confident knowing your students are getting the instruction they need to cover the Texas Essentials of Knowledge and Skills for Technology Applications.
