

## INTRODUCING

# Learning.com Tech Quest

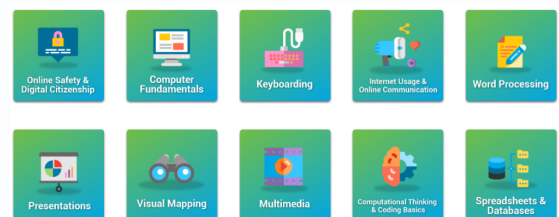

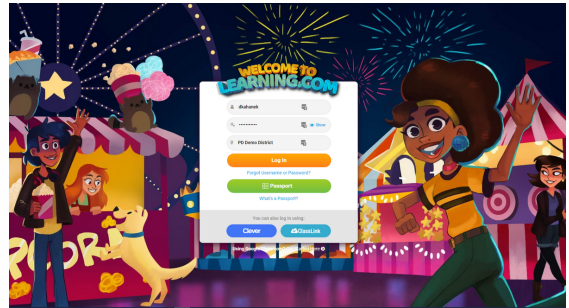

**What is Tech Quest?** Tech Quest is a NEW Learning.com feature that delivers essential technology skills to K-8 students without teachers needing to manage classes. It's magic. Every student that has a Learning.com account, is automatically assigned Tech Quest. Students just need to log in to their Learning.com account at [login.learning.com](https://login.learning.com), Clever or Classlink.

**What will my students see when they log in?** Upon logging in, students will select an avatar. They will see a pathway of auto-scored, student-led curriculum designed specifically for their grade level. Students click on the first step and move along the path. A visit to the Arcade provides access to keyboarding and coding activities.

**What topics are covered in Tech Quest?** All of the essentials students need to be successful digital learners such as: Online Safety and Digital Citizenship, Keyboarding, Word Processing, Internet Usage and Online Communication, Coding, Spreadsheets and Presentations.

**What if I have classes already set up?** No problem. Tech Quest will appear in the student's menu below other classes.

**How can I monitor student progress?** In the new teacher experience, a teacher dashboard will be available to you so you can view student progress.

## ABOUT LEARNING.COM

Learning.com's digital literacy curriculum enables schools to develop students' technology skills throughout core instruction.
